### DUSTY ROAD KENNEL

Type: ROUTINE INSPECTION

Date: Jul 09 2015 (July 9, 2015)

2.40 (b) (2)

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS):

There is a female Shih Tzu #218 that has an injured left eye that is dark red in color and swollen and very bloodshot in the throughout the white of the eye, and in the center of the eyeball. There is a small circular protrusion in the center of the eye that could be a tear or possibly puncture that could be the source of the injury or result. This is possibly a recent injury and had not been observed by the licensee until the inspection, and has not been treated. This same female had a large buildup of brown material on her teeth, with swollen and red gums due to inflammation. There were 2 areas on the gume where they were bleeding slightly around two teeth due to inflammation.

It is important that all injuries are identified as soon as possible and proper diagnosis and treatment is provided to decrease the pain or discomfort to the animal.

The licensee needs to contact the attending veterinarian for proper diagnosis and treatment of the eye.

To be corrected by: July 9, 2015

The licensee put a call out to the attending veterinarian by the end of the inspection.

Inspection and exit interview conducted with licensee

① Shihtzu has dark red swollen bloodshot eye. There is a small circular protrusion in center of eye.

This has not been observed by a vet.

② There is a large buildup of brown material on teeth & swollen, red gums.

### OUTDOOR HOUSING FACILITIES.

.... There is no bedding in the shelter structures in 8 x outdoor enclosures housing 12 dogs. The temperature last night before the inspection according to the NOAA website (weather.gov) for the location's zip code was 41 degrees F. A lack of clean, dry bedding can result in discomfort, stress, and hypothermia. Inspectors must ensure that all the dogs have access to clean, dry bedding if the temperature is below 50 degrees and additional bedding if the temperature is 35 degrees or lower.

TO BE CORRECTED BY: March 17, 2015

Exit interview conducted with facility representatives by William Heine ACI and Ronnie Plumlee VMO

### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

....

A female Shih Tzu, microchip #CAC1262125, was observed by the inspectors scratching and shaking her head repeatedly. Upon closer observation the inspectors noted that both of her inside ear flaps had thickened leather-like appearance. The right ear also had a yellowish discharge coming from the canal area. The neck and chest area of this dog has a thickened and leather-like appearance. When the inspector examined the folded skin on the neck and chest, the skin had patches of yellowish and crusted material. The inspector also noted this dog had a very strong musty yeast-like odor emitting from her. This excessive scratching, thickening of the skin, discharge from the ears and crusted dried material on the skin could be a medical condition, could cause discomfort and may be painful. The licensee stated that "This dog's condition has been going on for years but gets worse when it gets a haircut". When the inspector asked when the dog had a haircut the licensee replied that it was about a month ago. When asked if this dog was currently receiving any treatment he replied "No, the dog is better than it usually is". The licensee did say that he did have this dog treated in the past but the only documentation that was found was a statement written by the licensee dated 7-8 which said he had talked to his attending veterinarian about hair growth and was told "I would take care, the licensee must have this dog examined by a veterinarian for an appropriate diagnosis and treatment plan". The licensee must document this information and make it available to the inspector upon request. The licensee must ensure that all animals receive adequate care at all times.

To be corrected by: 20 May 2016

REPEAT

### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

In the kennel facility there are a total of five sheltered buildings and one indoor housing building. Throughout the kennel facility the following seven animals were identified to be evaluated by the attending veterinarian:

- In building #1 there is an adult male Shih Tzu who is ten (10) years old, chip #107288045, named Borko. Both of the animal's eyes are cloudy with green matter on the exterior.

- In building #2 there were two identified animals. One is a ten (10) year old Yorkshire Terrier, chip #072848580, named Jenny who was observed non-weight bearing on her left front paw. In the same building there was an adult male Maltese, chip #0032770312. In the wash down under the animal's raised enclosure were three piles of partially digested regurgitated food containing saliva. The animal had black buildup on both canine teeth with dark red gum line.

- In building #3 there are two identified animals. One is a ten (10) year old female Maltese, chip #107285063, which had a buildup of green matter on both canine and cheek teeth. The other animal is a male adult Yorkshire Terrier, chip # 10728626, which had only four teeth, two upper and two lower. All four of the teeth had a buildup of dark green matter on the tooth surfaces with white matter on the gum line.

In the whelping building there are two (2) animals. One is a five (5) month old female Maltese puppy, chip #040360814. The animal had been previously evaluated and under treatment by the attending veterinarian which ended on May 7, 2015 for a skin condition on the animal's underbelly. During the inspection the animal had green matter on both eyes and a hair loss which was a red draining area approximately the size of a quarter on its right shoulder. The animal still has a red rash type skin condition on its underbelly.

- The other animal in the whelping building is one adult female two (2) year old King Charles Cavalier, chip # 003662814 who has a large hair loss area on her right hip area. The animal has whelped a litter of puppies one (1) month earlier. The animal's hair is falling out in clumps.

A dog only has four teeth. All four teeth had buildup of dark green matter on surfaces & gums.

(May 26, 2016)

**2.40** (b) (3)

### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS)

There is a female Shih Tzu (#168) white in color that has a large amount of drainage coming from both eyes, with some brown crusty material on around the rims and in the corners of the eyes. The right eye has some green discharge in it, and the left eye had a small fleshy lump in the center of the eye. There has not been any treatment provided or veterinarian consulted at the time of the inspection.

Unchecked eye conditions can be painful and cause stress to the animal. Eye injuries can become chronic if not caught early and treated properly.

The veterinarian must be contacted for proper diagnosis and treatment of the eyes.

To be corrected by: May 27 2016

**2.40** (b) (3)

### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS)

A female Shih Tzu (#168) white had a excessive discharge coming from both eyes, with green mucus in the right eye and a fleshy lump in the center of the left eye. The skin under the fur at the corners of both eyes was red and raw due to the wet fur and amount of time it has been left un-noticed. The eye condition had not been observed until the time of the inspection, so no treatment had been given.

Daily observation of all animals is important in order to catch any health issue immediately in order to prevent a treatable condition from becoming chronic and painful.

There must be an increase in daily observation of all regulated animals to make sure there are no health issues that go un-noticed so that treatment can begin immediately when needed.

To be corrected by: May 26 2016

Shih Tzu has discharge from both eyes.  
Skin is red & raw

### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

There were three Pomeranians with matted hair and feces hanging from the back of their legs. A brown and white female, dr 0A02615862, a white female dr 0A02615831 and a brown male, dr 0A02614836. Matted hair on the dog can cause discomfort & could lead to infection or health problems for the dog. Matted hair of the dog could also be affected with the discomfort or pain associated with matted hair constantly pulling on the skin of the dog. The potential for the skin to become inflamed or infected exists with continued scratching. Matted hair does not maintain the same insulating qualities of normally groomed hair. Regular grooming of matted hair is necessary to ensure the health & well-being of all dogs.

3 dogs  
w/matted  
hair w/  
feces.

Inside the whelping building, there was a container of outdated Pyramer Pamoate, expiration date October 2012. This medication was intermingled with other products that are currently being used at the facility and are therefore ready for use. The usage of expired medical materials on required animals is not considered to be an acceptable veterinary practice and does not constitute adequate veterinary care. The effectiveness of the dosage level and expected results when expired drugs are administered could be drastically changed or may not work as anticipated. The licensee must ensure that all medications used have not gone past the recorded expiration date. To be corrected by 03-28-2015.

### CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

Inside the whelping building, rodent droppings were present on the floor around buckets and next to the walls. When inspectors entered the building an odor associated with rodents was present. Licensee advised they were not using any rodent prevention methods at the facility. Rodents and other vermin can spread disease and other health hazards that could adversely affect the health and well-being of the dogs. Owner must implement a program of pest and vermin control to protect the all the dogs throughout the facility. To be corrected by 03-23-2015.

### OUTDOOR HOUSING FACILITIES.

During the inspection, in the outdoor enclosures there were at least five of the outdoor shelters that needed more bedding in them. Some had bedding but needed more shavings so they can make a nest to sleep in. Barn outside shelter must have dry, clean bedding to protect the dogs from cold damp conditions. When the temperature drops below 35 degrees more bedding must be added. Dogs tend to nest in the bedding material, so having an adequate amount of bedding helps to keep the dogs comfortable and warm during the cold weather events. Letting the dogs sleep on cold damp surfaces can severely affect the health and well-being of the dogs. Owner must ensure that all dogs have adequate bedding to protect them from cold damp weather. To be corrected by 01-21-2016.

Inspection and exit interview conducted by Michael Tygart DVM and R. Whiteley ACI and a facility representative.
